Data in many forms

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered. Data are available on the Internet, compact disc, diskette, computer printouts, microfiche and microfilm, and magnetic tape. Maps and other geographic reference materials are available for some types of data. Direct online access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable database and retrieval system.

Note of appreciation

Canada owes the success of its statistical system to a long-standing co-operation involving Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued co-operation and goodwill.

Note de reconnaissance

Le succès du système statistique du Canada repose sur un partenariat bien établi entre Statistique Canada et la population, les entreprises, les administrations canadiennes et les autres organismes. Sans cette collaboration et cette bonne volonté, il serait impossible de produire des statistiques précises et actuelles.

Acknowledgements

This publication is the result of the effort, co-operation and diligence of many people.

First, it would not have been possible without the continued support and co-operation of the farm operators who participated in the 1996 Census of Agriculture. The hard work of Statistics Canada staff in the many aspects of the Census of Agriculture and the census representatives hired to perform the various data collection activities is gratefully appreciated.

Special thanks are owed to Suzanne Bastien and Larry Neily for their work in designing and preparing the publication; to Bill Steele, Paul Grant and Bernard Houle for the database creation, data retrieval, and application of confidentiality procedures; to Tom Thibault and Daryl Keen for writing the text and preparing the highlights; to Cathy Robinson for organizing and supervising the numerous proofreading activities; and to Michael Brancati and Peter van Wesenbeek for producing the reference maps.

In addition, the contributions of the following persons are greatly appreciated: Mel Jones, Gary Davidson, Rosemary Villani, Lynda Kemp, Cathy Cromey, Wilson Freeman, Norah Hillary, Paul Murray, Lorraine St-Jean, Michael Westland, Marc Lavergne, Christiane Jean, Kristine Lamontagne, Heather Archibald, Charlene Elgee, Cyd Rainville, Suzanne Olsheskie, Pierre Rondeau, Richard Dobbins, Louise Larouche, Suzanne Durocher, and the proofreading staff from the Agriculture Division; Barbara Taylor, Dale Robertson, Robert Faubert, Jean-François Laroche, Katrina Beardow and Fiona Campbell-Daigle from System Development Division; Pierre Lavallée and Paul Kelly from Business Survey Methods Division; and Tom Vradenburg, Nathalie Turcotte, Marie-Pierre Tarte and Annie Lebeau from Communications Division.

Finally, the assistance of Statistics Canada staff from Official Languages and Translation Division, Dissemination Division and the Library and Information Centre is gratefully acknowledged.

Remerciements

La présente publication est le résultat des efforts, de la collaboration et de la diligence de nombreuses personnes.

Il convient avant tout de préciser qu'elle n'aurait pu se matérialiser sans la coopération et le soutien continus des exploitants agricoles qui ont participé au Recensement de l'agriculture de 1996. Nous tenons à souligner l'important apport du personnel de Statistique Canada, qui s'est chargé des nombreux aspects du Recensement de l'agriculture, et des recenseurs embauchés pour s'acquitter de différentes activités de collecte de données.

Nous adressons des remerciements particuliers à Suzanne Bastien et à Larry Neily, qui se sont acquittés de la tâche de concevoir et de préparer la publication. Nous adressons aussi des remerciements à Bill Steele, à Paul Grant et à Bernard Houle, qui se sont chargés de la création de la base de données, de la recherche de données et de l'application des mesures relatives à la confidentialité. Nous tenons à remercier également Tom Thibault et Daryl Keen, qui ont rédigé le texte et élaboré les faits saillants; Cathy Robinson, qui a organisé et supervisé les nombreuses activités de correction d'épreuves; ainsi que Michael Brancati et Peter van Wesenbeek, qui ont produit les cartes de référence.

En outre, nous tenons à souligner l'apport précieux des personnes suivantes: Mel Jones, Gary Davidson, Rosemary Villani, Lynda Kemp, Cathy Cromey, Wilson Freeman, Norah Hillary, Paul Murray, Lorraine St-Jean, Michael Westland, Marc Lavergne, Christiane Jean, Kristine Lamontagne, Heather Archibald, Charlene Elgee, Cyd Rainville, Suzanne Olsheskie, Pierre Rondeau, Richard Dobbins, Louise Larouche, Suzanne Durocher et le personnel de correction d'épreuves de la Division de l'agriculture. Nous désirons aussi remercier Barbara Taylor, Dale Robertson, Robert Faubert, Jean-François Laroche, Katrina Beardow et Fiona Campbell-Daigle de la Division du développement de systèmes, Pierre Lavallée et Paul Kelly de la Division des méthodes d'enquêtes-entreprises, ainsi que Tom Vradenburg, Nathalie Turcotte, Marie-Pierre Tarte et Annie Lebeau de la Division des communications.

Enfin, nous exprimons nos remerciements au personnel de la Division des langues officielles et de la traduction, à celui de la Division de la diffusion ainsi qu'à celui de la Bibliothèque et du Centre d'information de Statistique Canada.

Appendix I – 1996 Census of Agriculture Questionnaire**Annexe I – Questionnaire du Recensement de l'agriculture de 1996****Appendix II – Reference Maps****Annexe II – Cartes de référence**

1. Highlights

- There were 67,520 census farms enumerated in Ontario in 1996. Excluding 402 farms producing only Christmas trees, which were counted for the first time in 1996, there was a 2.2% decrease since 1991.
- The number of farms with gross farm receipts of \$100,000 or more (in constant 1995 dollars) increased 2% since 1991 to 20,000 in 1996.
- Total farm area increased 3% since 1991 to 13.9 million acres (5.6 million hectares) in 1996. The total area of land in crops increased 4% between 1991 and 1996 to 8.8 million acres (3.5 million hectares).
- The area of total hay and fodder crops decreased 2% to 2.5 million acres (1.0 million hectares) between 1991 and 1996. The total area of grain and silage corn fell 1% since 1991 to 2.2 million acres (887,000 hectares) in 1996. Soybean area increased 36% to 1.9 million acres (776,000 hectares) between 1991 and 1996, representing 89% of Canada's total soybean area.
- The total vegetable growing area in Ontario accounted for over half of the national total in 1996. The 158,000 acres (64,000 hectares) reported in 1996 represent a 3% increase since 1991.
- In 1995, over 555,000 Christmas trees were harvested in Ontario. In 1996, a total of 1,345 farms, the largest provincial total, reported growing 28,000 acres (11,000 hectares) of Christmas trees.
- Total greenhouse area expanded 38% between 1991 and 1996 to 63.3 million square feet (5.9 million square metres).
- In 1995, commercial fertilizer was used on 5.9 million acres (2.4 million hectares), a 6% increase since 1990. Herbicide coverage increased to 4.9 million acres (2.0 million hectares) in 1995, up 11% from 1990.
- The area of no-till land increased 350% between 1991 and 1996 to 1.1 million acres (455,000

1. Faits saillants

- En 1996, on a dénombré 67,520 fermes de recensement en Ontario. Exception faite des 402 fermes qui ne produisent que des arbres de Noël, lesquelles étaient comptées pour la première fois en 1996, il y a eu une diminution de 2.2% depuis 1991.
- Le nombre de fermes dont les revenus agricoles bruts atteignent ou dépassent \$100,000 (en dollars constants de 1995) a progressé de 2% depuis 1991, pour atteindre 20,000 en 1996.
- La superficie agricole totale a augmenté de 3% depuis 1991, pour se chiffrer à 13.9 millions d'acres (5.6 millions d'hectares) en 1996. La superficie totale des terres en culture a progressé de 4% entre 1991 et 1996, atteignant 8.8 millions d'acres (3.5 millions d'hectares).
- La superficie totale consacrée au foin et aux cultures fourragères a diminué de 2% entre 1991 et 1996, tombant à 2.5 millions d'acres (1.0 million d'hectares). La superficie totale consacrée au maïs-grain et au maïs à ensilage a chuté de 1% depuis 1991, pour s'établir à 2.2 millions d'acres (887,000 hectares) en 1996. La superficie consacrée au soya a augmenté de 36% entre 1991 et 1996, atteignant 1.9 million d'acres (776,000 hectares), soit 89% de la superficie totale consacrée au soya au Canada.
- La superficie totale consacrée à la culture des légumes en Ontario représentait plus de la moitié du total national en 1996. Les 158,000 acres (64,000 hectares) déclarées en 1996 représentaient une augmentation de 3% par rapport à 1991.
- En 1995, plus de 555,000 arbres de Noël ont été récoltés en Ontario. En 1996, 1,345 fermes, soit le plus grand nombre parmi toutes les provinces, ont consacré 28,000 acres (11,000 hectares) à la production d'arbres de Noël.
- La superficie totale des serres a augmenté de 38% entre 1991 et 1996, pour atteindre 63.3 millions de pieds carrés (5.9 millions de mètres carrés).
- En 1995, des engrais chimiques ont été appliqués sur 5.9 millions d'acres (2.4 millions d'hectares), ce qui représente 6% de plus qu'en 1990. La superficie traitée aux herbicides s'élevait à 4.9 millions d'acres (2.0 millions d'hectares) en 1995, ce qui constitue 11% de plus qu'en 1990.
- La superficie des terres sans aucun travail préalable du sol a augmenté de 350% entre 1991 et 1996, pour atteindre

hectares). This represented 18% of all land prepared for seeding. The area tilled retaining most of the crop residue on the soil surface increased 25% since 1991 to 1.4 million acres (556,000 hectares), representing 22% of the total land prepared for seeding in 1996.

- The total number of hens and chickens increased 5% to 35.6 million between 1991 and 1996. The number of broilers, roasters and Cornish hens grew 3%, and accounted for 64% of this total. The number of laying hens and pullets increased 7% from 1991 to 1996.
- The total number of cattle and calves in Ontario was virtually unchanged between 1991 and 1996, at 2.3 million head. Beef cow numbers rose 13% to 441,000 head, while dairy cow numbers fell 9%, to 405,000 head. This census was the first to report that the number of Ontario beef cows exceeded the number of dairy cows.
- The total number of pigs decreased 3% between 1991 and 1996 to 2.8 million. The total number of sheep and lambs decreased 8% from 1991 to 231,000 in 1996.
- Ontario's 45,000 goats accounted for more than one-third (36%) of the 126,000 in Canada in 1996.
- The 16,000 deer and elk raised in Ontario represented 23% of the national total of 70,000 in 1996.
- Personal computers were used for farm management on 21% of all farms in Ontario in 1996, up from 11% in 1991.
- In 1995, total gross farm receipts (in constant 1995 dollars) were up 14% from 1990 to \$7.8 billion. Total farm operating expenses (in constant 1995 dollars) rose 9% between 1990 and 1995 to \$6.5 billion.
- Total purchases of capital assets and capital improvements amounted to \$1.3 billion in 1995. New farm machinery and equipment expenditures made up 22% of this total, purchases of land accounted for 20%, and used farm vehicles, machinery and equipment purchases were 13% of total farm capital expenditures reported.

1.1 million d'acres (455,000 hectares). Cela représentait 18% de toutes les terres préparées pour le semis. La superficie soumise à un travail du sol qui maintient à la surface la plupart des résidus de récolte a augmenté de 25% depuis 1991, pour atteindre 1.4 million d'acres (556,000 hectares), soit 22% de toutes les terres préparées pour le semis en 1996.

- Le nombre total de poules et de poulets a augmenté de 5% entre 1991 et 1996, atteignant 35.6 millions. Le nombre de poulets à griller, de poulets à rôtir et de poulets de Cornouailles a connu une hausse de 3% et représentait 64% de ce total. Le nombre de poules pondeuses et de poulettes a progressé de 7% de 1991 à 1996.
- Le nombre total de bovins et de veaux en Ontario, soit 2.3 millions, est demeuré sensiblement le même entre 1991 et 1996. Le nombre de vaches de boucherie a augmenté de 13%, atteignant 441,000, tandis que le nombre de vaches laitières a chuté de 9%, s'établissant à 405,000. Il s'agissait du premier recensement où le nombre de vaches de boucherie dépassait le nombre de vaches laitières en Ontario.
- Le nombre total de porcs a diminué de 3% entre 1991 et 1996, s'établissant à 2.8 millions. Le nombre total de moutons et d'agneaux a fléchi de 8% par rapport à 1991, se fixant à 231,000 en 1996.
- Les 45,000 chèvres de l'Ontario représentaient plus d'un tiers (36%) des 126,000 chèvres élevées au Canada en 1996.
- Les 16,000 chevreuils et élans élevés en Ontario représentaient 23 % du total national de 70,000 en 1996.
- Les micro-ordinateurs ont été utilisés pour la gestion de 21% de toutes les fermes de l'Ontario en 1996, comparativement à 11% en 1991.
- En 1995, les revenus agricoles bruts totaux (en dollars constants de 1995) s'élevaient à 7.8 milliards de dollars, en hausse de 14% par rapport à 1990. Les dépenses totales d'exploitation agricole (en dollars constants de 1995) ont augmenté de 9% entre 1990 et 1995, pour se chiffrer à 6.5 milliards de dollars.
- Le montant total pour l'achat de biens immobilisés et pour les améliorations apportées aux immobilisations a atteint 1.3 milliard de dollars en 1995. Les dépenses pour les machines, le matériel et l'équipement agricoles neufs formaient 22% de ce total, tandis que les achats de terres en constituaient 20%, et les achats de véhicules, de machines, de matériel et d'équipement agricoles usagés représentaient 13% du total des dépenses en capital agricole.

2. Introduction

The data in this publication result from the 1996 Census of Agriculture, which was conducted on May 14, 1996 and included all agricultural operations in Canada. The Agricultural Profile series of publications presents area profile tables for all 1996 Census of Agriculture farm variables. This series consists of eight publications: one for Canada, one for the Atlantic provinces and one for each of the other six provinces.

Users of census data were consulted during the planning phase for the 1996 Census of Agriculture. Their comments and suggestions helped determine the questionnaire content and data dissemination strategy. Census of Agriculture data are important to a wide variety of users in planning, developing and evaluating agricultural policy and in analysing the agricultural and agri-food industries.

3. How the Agricultural Profiles are Organized

Each publication presents 35 data tables displaying basic counts and totals of all farm variables from the 1996 Census of Agriculture questionnaire.

The *Agricultural Profile of Canada* contains three sections. Section 1 presents area profile data in 32 tables for Canada (excluding the Yukon and Northwest Territories) and for each province. Section 2 presents cross-classified data in two tables at the Canada level. These tables include selected variables classified by gross farm receipts and by farm type. Section 3 presents one table with data for the Yukon and Northwest Territories.

The Atlantic and provincial profile publications each contain two sections. Section 1 presents area profile data in 32 tables by province, census agricultural region and census division. An additional table provides selected small area data at the census division and census consolidated subdivision levels. Section 2 presents cross-classified data in two tables at the provincial level. These tables include selected

2. Introduction

Les données de cette publication découlent du Recensement de l'agriculture de 1996, qui a eu lieu le 14 mai 1996, et qui englobait toutes les exploitations agricoles au Canada. La série des Profils agricoles présente sous forme de tableaux les profils de secteurs de l'ensemble des variables agricoles du Recensement de l'agriculture de 1996. Cette série compte huit publications: une pour le Canada, une pour les provinces de l'Atlantique et une pour chacune des six autres provinces.

Les utilisateurs des données du recensement ont été consultés au moment de la planification du Recensement de l'agriculture de 1996. Leurs commentaires et leurs suggestions ont permis de déterminer le contenu du questionnaire et la stratégie de diffusion des données. Les données du Recensement de l'agriculture sont importantes pour une vaste gamme d'utilisateurs pour la planification, l'élaboration et l'évaluation des politiques agricoles ainsi que pour l'analyse des industries agricole et agroalimentaire.

3. Structure des Profils agricoles

Chaque publication renferme 35 tableaux de données faisant état des chiffres et des totaux de base de toutes les variables agricoles tirées du questionnaire du Recensement de l'agriculture de 1996.

Le *Profil agricole du Canada* renferme trois sections. La section 1 présente les profils de secteurs au moyen de 32 tableaux pour le Canada (excluant le Yukon et les Territoires du Nord-Ouest) et pour chaque province. La section 2 présente des données recoupées en deux tableaux à l'échelle du Canada. Ces tableaux comprennent certaines variables classées par revenus agricoles bruts et par genre de ferme. La section 3 contient un seul tableau regroupant les données du Yukon et des Territoires du Nord-Ouest.

Les publications des profils de la région de l'Atlantique et des autres provinces renferment chacune deux sections. La section 1 présente, à l'aide de 32 tableaux, les profils de secteurs par province, par région agricole de recensement et par division de recensement. Un tableau supplémentaire présente certaines données régionales à l'échelle des divisions de recensement et des subdivisions de recensement unifiées. La section 2 présente des données recoupées dans

variables classified by gross farm receipts and by farm type.

Each publication also contains the following sections, which provide information that relates to, or clarifies, the data presented:

Related Material lists the other Census of Agriculture products as well as selected Agriculture Division and Census of Population publications.

Background contains information on the history of the census, questionnaire development, data collection procedures and data validation.

Data Quality briefly describes the most common types of errors that occur when census data are collected and processed, and outlines the measures taken to ensure that 1996 Census of Agriculture data are of high quality.

Confidentiality provides an overview of the measures taken to ensure that census data cannot be associated with a specific agricultural operation or individual.

Notes to Data Users offers help in understanding and interpreting the data. This section includes general notes pertaining to such items as the use of conversion factors, rounding of figures and the expanded definition of a census farm for 1996. Also included are notes on data tables and a list identifying the geographic areas that were amalgamated for purposes of data confidentiality. **Please consult this section before analysing the data.**

Definitions and Explanations clarifies the meaning and scope of key geographic units, census concepts and variables.

Appendices present a copy of the 1996 Census of Agriculture questionnaire in Appendix I and reference maps, locating the geographic areas listed in the data tables, in Appendix II.

deux tableaux à l'échelle provinciale. Ces tableaux comprennent certaines variables classées par revenus agricoles bruts et par genre de ferme.

Chaque publication comprend également les sections suivantes, lesquelles contiennent des renseignements qui concernent ou précisent les données présentées:

Documentation complémentaire dresse la liste des autres produits du Recensement de l'agriculture ainsi que de certaines publications de la Division de l'agriculture et du Recensement de la population.

Contexte renseigne sur l'historique du recensement, l'élaboration du questionnaire, les procédures de collecte des données et la validation des données.

Qualité des données donne une brève description des genres d'erreurs qui surviennent le plus fréquemment dans la collecte et le traitement des données du recensement, et décrit les mesures prises pour assurer la qualité des données du Recensement de l'agriculture de 1996.

Confidentialité donne un aperçu des mesures prises pour que les données du recensement ne puissent être rattachées à une exploitation agricole particulière ou à un particulier.

Notes à l'intention des utilisateurs des données aide à comprendre et à interpréter les données. Cette section renferme des notes d'ordre général sur des points comme l'utilisation des facteurs de conversion et l'arrondissement des chiffres, ainsi que la définition élargie de la ferme de recensement pour 1996. On y trouve également des notes sur les tableaux de données et une liste précisant les régions géographiques qui ont été combinées afin de respecter les contraintes de confidentialité des données. **Veillez consulter cette section avant d'analyser les données.**

Définitions et explications précise le sens et la portée des unités géographiques, des concepts du recensement et des variables clés.

Annexes présente à l'annexe I une reproduction du questionnaire du Recensement de l'agriculture de 1996 et, à l'annexe II, des cartes de référence montrant l'emplacement des régions géographiques énumérées dans les tableaux de données.

This publication is an updated and expanded version of the popular historical publication introduced in 1991. It presents basic counts, totals, percentage changes and percent distributions for a broad range of variables at the Canada and province levels for the 1976, 1981, 1986, 1991 and 1996 Censuses of Agriculture. Two new sections have been added: the first presents 75 years of Census of Agriculture data (1921 to 1996) for selected variables; and the second highlights the changes between 1991 and 1996 in the land management practices variables introduced in 1991.

Profile of Canadian Farm Operators, Catalogue no. 93-359-XPB. Available in the fall of 1997.

This new publication presents farm operator characteristics and selected farm variables at the Canada and province levels, cross-classified by the number of operators per farm and the age and sex of farm operators. It also includes tables comparing 1991 and 1996 data.

5. Background

5.1 History

Provisions were made under the *British North America (BNA) Act* of 1867 for a census to be taken every 10 years starting in 1871. By the turn of the century, however, Western Canada was rapidly expanding. To monitor this growth, a Census of Agriculture was taken every five years in Manitoba, starting in 1896, and in Alberta and Saskatchewan, beginning in 1906. By 1956, rapid economic growth and development created the need for national demographic and agricultural information at more frequent intervals. To meet this need, the five-year Census of Agriculture was extended to the entire country in 1956 and has since been conducted concurrently with the Census of Population every five years.

The 1996 Census of Agriculture was conducted on May 14, 1996 in conjunction with the Census of Population. Whereas previous censuses were held on the first Tuesday in June, the date for the 1996 Census was changed to the second Tuesday in May. Agricultural operators were required to complete both

5. Contexte

5.1 Historique

L'*Acte de l'Amérique du Nord britannique (AANB)* de 1867 prévoyait la tenue d'un recensement tous les 10 ans à compter de 1871. Au tournant du siècle, toutefois, l'Ouest canadien connaissait une croissance rapide. Pour mesurer cette dernière, on a procédé tous les cinq ans à un recensement de l'agriculture, d'abord au Manitoba à compter de 1896, puis en Alberta et en Saskatchewan à compter de 1906. En 1956, la croissance économique et le développement rapides ont fait naître le besoin de données nationales sur la démographie et sur l'agriculture à intervalles plus fréquents. Pour répondre à ce besoin, on a étendu à tout le pays, en 1956, le Recensement quinquennal de l'agriculture. Depuis lors, ce recensement a lieu tous les cinq ans en même temps que le Recensement de la population.

Le Recensement de l'agriculture de 1996 a eu lieu le 14 mai 1996, en même temps que le Recensement de la population. Bien que les recensements antérieurs se soient tenus le premier mardi de juin, le Recensement de 1996 s'est tenu le deuxième mardi de mai. Les exploitants agricoles devaient remplir à la fois le questionnaire du Recensement

the Census of Agriculture and Census of Population questionnaires.

The Census of Agriculture produces a snapshot of Canadian agriculture by providing statistics at national, provincial and subprovincial levels, on such topics as crop areas, number of livestock, number and value of farm machinery, farm operating expenses and receipts, purchases of capital assets, weeks of paid labour, and land management practices.

The Census of Population, on the other hand, provides important information on various characteristics of the Canadian population such as marital status, languages spoken, education level, income, labour market activities and household activities.

5.2 Questionnaire Development

User workshops were held across Canada to determine the data requirements for the 1996 Census of Agriculture. The results of this consultation process and extensive testing with agricultural operators were instrumental in developing the content of the 1996 questionnaire. The questionnaire was subsequently approved by Cabinet in the summer of 1995.

Certain basic questions appear on every census, while other questions are modified, dropped or added. Examples of new topics covered in the 1996 Census of Agriculture include:

- the expansion of questions on land management practices;
- expenditures on the purchases of major capital assets and capital improvements;
- area of Christmas trees grown and number of trees harvested;
- number of birds hatched in commercial poultry hatcheries; and
- number of bison, deer and llamas.

The differences between the 1991 and 1996 Census questionnaires may be important for your data applications. A copy of the 1996 Census of Agriculture questionnaire can be found in Appendix I; a copy of the 1991 questionnaire appears at the back of most 1991 Census of Agriculture data publications.

de l'agriculture et celui du Recensement de la population.

Le Recensement de l'agriculture brosse instantanément le portrait de l'agriculture canadienne en fournissant, à l'échelle nationale, provinciale et infraprovinciale, des données statistiques sur des sujets comme les superficies cultivées, le nombre de têtes de bétail, le nombre et la valeur des machines agricoles, les dépenses et les revenus d'exploitation agricole, les achats de biens immobilisés, les semaines de travail rémunéré et les pratiques de gestion des terres.

Pour sa part, le Recensement de la population fournit des renseignements importants sur diverses caractéristiques de la population canadienne telles que l'état matrimonial, les langues parlées, le niveau de scolarité, le revenu, les activités sur le marché du travail et les activités à la maison.

5.2 Élaboration du questionnaire

La tenue d'ateliers regroupant des utilisateurs partout au Canada a permis de déterminer les besoins en matière de données pour le Recensement de l'agriculture de 1996. Les résultats de ce processus de consultation ainsi que des essais poussés auprès d'exploitants agricoles ont permis d'élaborer le contenu du questionnaire de 1996. Le questionnaire a par la suite été approuvé par le Cabinet au cours de l'été 1995.

Certaines questions de base sont conservées d'un recensement à l'autre, alors que d'autres sont modifiées, éliminées ou ajoutées. Voici des exemples de nouveaux sujets traités par le Recensement de l'agriculture de 1996:

- l'approfondissement des questions sur les méthodes de gestion des terres;
- les dépenses pour l'achat de biens immobilisés importants et pour les améliorations apportées aux immobilisations;
- la superficie consacrée à la production d'arbres de Noël et le nombre d'arbres récoltés;
- le nombre d'oiseaux éclos dans les couvoirs commerciaux;
- le nombre de bisons, de chevreuils et de lamas.

Les différences entre les questionnaires des recensements de 1991 et de 1996 pourraient s'avérer plus ou moins importantes selon l'usage que vous comptez faire des données. Une reproduction du questionnaire du Recensement de l'agriculture de 1996 figure à l'annexe I et une reproduction de celui de 1991 figure dans la plupart des publications relatives aux données du Recensement de l'agriculture de 1991.

5.3 Collection Procedures

Conducting the 1996 Census of Agriculture jointly with the Census of Population helped streamline collection procedures and saved millions of dollars. Census representatives delivered Census of Population questionnaires to every household in their enumeration areas. A Census of Agriculture questionnaire was also dropped off if someone in the household operated an agricultural operation.

Census of Agriculture respondents were asked to mail back their completed questionnaires in the return envelopes provided. An exception to this process was in remote or northern areas of the country; there, census representatives visited the agricultural operations and completed the forms by interviewing the farm operators.

Another important feature of the collection process was the Census of Agriculture Help Line, a toll-free telephone service to help respondents complete the questionnaire.

Once the questionnaires were mailed back, the census representative reviewed them to ensure that they were properly completed and that all agricultural operations in the enumeration area were accounted for. If questionnaires were not returned, or answers were incomplete, the census representative followed up by telephone or personal visit to the farm operators. The questionnaires were then sent to Regional Processing Centres for data capture and finally, the data files and questionnaires were forwarded separately to Ottawa for further processing.

5.3.1 Progress of Seeding Follow-up

The change in Census Day (from the first Tuesday in June to the second Tuesday in May) had a significant impact on field crop areas reported by agricultural operators. Much of the seeding of crops across Canada typically occurs between the first of May and early June. Due to a cold, wet spring, a large portion of the crop was not seeded at the time respondents completed their forms; consequently, there was a possibility that crops seeded after Census Day would differ from what had been planned and reported on the census questionnaire.

The Progress of Seeding Follow-up was implemented to verify or update crop data. It involved contacting over 115,000 farm operators across the country who

5.3 Procédures de collecte

Le fait de réaliser simultanément en 1996 le Recensement de l'agriculture et le Recensement de la population a permis de rationaliser les procédures de collecte et d'épargner des millions de dollars. Les recenseurs ont distribué un questionnaire du Recensement de la population à chaque ménage de leur secteur de dénombrement. Ils y ont aussi laissé un questionnaire du Recensement de l'agriculture si un membre du ménage exploitait une exploitation agricole.

Les répondants du Recensement de l'agriculture devaient retourner leur questionnaire par la poste dans l'enveloppe-réponse fournie. Les régions éloignées ou nordiques faisaient exception à la règle: les recenseurs y visitaient les exploitations agricoles et remplissaient les formulaires en interviewant les exploitants agricoles.

L'Assistance téléphonique du Recensement de l'agriculture, un service téléphonique sans frais permettant aux répondants d'obtenir de l'aide afin de remplir leur questionnaire, comptait pour un autre élément important du processus de collecte.

Une fois les questionnaires reçus, les recenseurs les ont revus pour vérifier qu'ils avaient été correctement remplis et qu'à chaque exploitation agricole de leur secteur de dénombrement correspondait un questionnaire. Si certains questionnaires n'avaient pas été retournés, ou si les réponses étaient incomplètes, le recenseur faisait un suivi par téléphone ou rendait personnellement visite aux exploitants agricoles. Les questionnaires étaient ensuite envoyés aux centres régionaux de dépouillement pour la saisie des données et, enfin, les fichiers de données et les questionnaires étaient transmis séparément à Ottawa aux fins d'un traitement plus poussé.

5.3.1 Suivi de l'état d'avancement du semis

Le changement de la date du recensement (du premier mardi de juin au deuxième mardi de mai) a eu un effet important sur les superficies de grande culture qu'ont déclarées les exploitants agricoles. La majeure partie de l'ensemencement des terres au Canada s'effectue habituellement entre le 1^{er} mai et le début juin. Le printemps ayant été froid et humide, une proportion considérable des champs n'étaient pas ensemencés lorsque les répondants ont rempli leur formulaire, d'où la possibilité que les superficies ensemencées après le jour du recensement diffèrent de celles envisagées et déclarées dans le questionnaire du recensement.

Le Suivi de l'état d'avancement du semis a été élaboré afin de vérifier et de mettre à jour les données sur les cultures. Ainsi, on a communiqué avec plus de 115,000 exploitants

reported less than 90% of their field crops seeded at the time they completed their Census of Agriculture forms. The Progress of Seeding Follow-up was a major factor in obtaining the high-quality crop area data required for historical comparability, benchmarking intercensal crop estimates and small area data analysis.

5.4 Data Validation

Following an extensive data processing stage, subject matter analysts reviewed both aggregated data at various geographic levels and individual questionnaire data. The 1996 data were also compared with previous census and current agricultural survey results as well as with information obtained from administrative sources. This allowed for the identification and correction of errors due to coverage, misreporting, data capture, and so on, that had not been previously detected. When necessary, respondents were contacted to verify their responses. Toward the end of the validation process, certification reports containing results of the analysis and recommendations for dissemination were presented to a review committee, which was responsible for approving the release of data for each variable.

6. Data Quality

An integral part of each Census of Agriculture is the implementation of new or enhanced procedures and technologies to improve not only the collection of complete and accurate information, but also the processing, validation and dissemination of the data collected. Examples of such procedures and technologies adopted for the 1996 Census of Agriculture include the Progress of Seeding Follow-up, the electronic imaging of questionnaires and the expanded use of administrative data in the data validation process. In addition, to help ensure that data from the 1996 Census of Agriculture are of consistently high quality, improved control procedures were incorporated into each of the collection and data processing stages.

Primarily as a result of adopting these procedures and technologies, the 1996 Census of Agriculture data are

agricoles du pays qui ont déclaré que moins de 90% de leurs superficies de grandes cultures étaient déjà ensemencées lorsqu'ils ont rempli leur formulaire du Recensement de l'agriculture. Le Suivi de l'état d'avancement du semis a été un facteur important de l'obtention des données de qualité supérieure portant sur les superficies de grande culture, données nécessaires pour procéder à des comparaisons historiques, établir des données repères pour les estimations intercensitaires des cultures et analyser des données régionales.

5.4 Validation des données

Après avoir effectué un traitement poussé des données, les analystes des domaines spécialisés ont revu à la fois les données agrégées à différents niveaux géographiques et les données des questionnaires individuels. Les données de 1996 ont aussi été comparées avec les résultats des recensements antérieurs et avec ceux des enquêtes agricoles en cours, ainsi qu'avec des renseignements tirés de sources administratives. Cela a permis de repérer et de corriger les erreurs relatives à la couverture, aux déclarations erronées, à la saisie de données et ainsi de suite, qui étaient passées inaperçues jusque-là. Au besoin, on a communiqué avec les répondants pour vérifier leurs réponses. Vers la fin du processus de validation, on a préparé des rapports de certification présentant les résultats de l'analyse ainsi que des recommandations en vue de la diffusion. Ces rapports ont été présentés à un comité de révision chargé d'approuver la diffusion des données relatives à chacune des variables.

6. Qualité des données

Une partie intégrante de chaque Recensement de l'agriculture est la mise en œuvre de procédures et de technologies nouvelles ou plus perfectionnées pour améliorer non seulement la collecte de renseignements complets et exacts, mais aussi le traitement, la validation et la diffusion des données recueillies. Parmi les exemples de ces procédures et technologies adoptées pour le Recensement de l'agriculture de 1996, citons le Suivi de l'état d'avancement du semis, l'imagerie électronique des questionnaires et l'utilisation accrue des données administratives dans le processus de validation des données. En outre, l'application de procédés de contrôle améliorés à chacune des étapes de la collecte et du traitement des données a permis d'assurer la qualité des données du Recensement de l'agriculture de 1996.

Grâce surtout à l'adoption de ces procédures et de ces technologies, les données du Recensement de l'agriculture

of very good quality, with the major variables generally being of the highest quality. A response rate of almost 99% also contributed to the overall success of the 1996 Census of Agriculture.

With a project as large and complex as the Census of Agriculture, the resulting data are inevitably subject to a certain degree of error. Knowing the types of errors that can occur and how they affect specific variables will help users assess the usefulness of the data for their particular applications. The most common types of errors are described below. Notes on specific variables are provided in Section 8.2.

6.1 Coverage Errors

In spite of efforts by census representatives to locate and enumerate all agricultural operations in Canada, some were missed, primarily because of the difficulty in correctly identifying an agricultural operation when none of its operators lived on or near the operation. To reduce undercoverage, census representatives were instructed to ask a member of every household whether someone in the household operated an agricultural operation. In addition, a question asking if anyone in the household operated an agricultural operation appeared on the Census of Population questionnaire to identify farm operators who were not contacted when the questionnaires were delivered. If a Census of Population questionnaire was returned with this question marked "yes," the census representative ensured that the household also received a Census of Agriculture questionnaire.

6.2 Non-response Errors

Some questionnaires were only partially completed or not completed at all, usually due to the operator's absence during the census period or a refusal to complete the questionnaire. In either case, if the follow-up attempt to obtain the appropriate information was unsuccessful, missing responses were estimated using an automated imputation procedure during the subsequent data processing stage. For the most part, this procedure replaced a missing or inconsistent response, either with a value that was consistent with the other data provided on the questionnaire, or with a response obtained from the questionnaire of a similar agricultural operation. Data resulting from this procedure generally had little impact on the final figures released.

de 1996 sont de très bonne qualité, les variables importantes étant généralement de la plus haute qualité. Un taux de réponse de près de 99% a aussi contribué au succès global du Recensement de l'agriculture de 1996.

Compte tenu de l'envergure et de la complexité du Recensement de l'agriculture, il est inévitable qu'une certaine marge d'erreur s'applique aux données obtenues. Le fait de connaître les types d'erreurs qui peuvent survenir et leurs conséquences sur des variables déterminées aidera les utilisateurs à évaluer l'utilité des données pour les applications particulières qu'ils envisagent. Les types d'erreurs les plus courants sont exposés ci-après. Des notes sur les variables particulières figurent à la section 8.2.

6.1 Erreurs de couverture

Malgré les efforts qu'ont déployés les recenseurs pour repérer et dénombrer toutes les exploitations agricoles au Canada, certaines d'entre elles ont été oubliées, surtout à cause de la difficulté que pose le repérage d'une exploitation agricole près de laquelle ou sur laquelle aucun des exploitants n'habite. Afin de réduire l'importance de ce sous-dénombrement, les recenseurs devaient demander à une personne de chaque ménage si un membre du ménage exploitait une exploitation agricole. En outre, une question visant à déterminer si quelqu'un dans le ménage exploitait une exploitation agricole apparaissait dans le questionnaire du Recensement de la population. Elle permettait de repérer les exploitants agricoles avec qui on n'était pas entré en contact lors de la distribution des questionnaires. Si la réponse à cette question était «oui» dans un questionnaire du Recensement de la population, le recenseur vérifiait que le ménage avait également reçu un questionnaire du Recensement de l'agriculture.

6.2 Erreurs de non-réponse

Certains questionnaires n'ont été que partiellement remplis ou ont été laissés en blanc, habituellement parce que l'exploitant était absent pendant la période du recensement ou parce qu'il refusait de remplir le questionnaire. Dans les deux cas, si le suivi pour tenter d'obtenir les renseignements appropriés se révélait infructueux, les réponses manquantes étaient estimées à l'étape subséquente du traitement des données au moyen d'une procédure d'imputation automatique. Pour l'essentiel, cette procédure remplaçait une réponse manquante ou incohérente soit par une valeur compatible avec les autres données fournies dans le questionnaire, soit par une réponse tirée du questionnaire d'une exploitation agricole semblable. Les données découlant de cette procédure n'avaient généralement que peu d'incidence sur les chiffres définitifs diffusés.

6.3 Response Errors

Operators sometimes provided inaccurate responses on the questionnaire, perhaps as a result of misinterpretation of a question, incorrect placement of a response or approximation of a response. Very large or inconsistent responses were confirmed or corrected by contacting the operators, since such responses could have a significant impact on totals at either the provincial or the subprovincial level.

6.4 Processing Errors

Errors can arise at any stage of data processing, including keying errors during data capture, manual coding errors, and errors occurring during the imputation procedure (to correct missing or inconsistent responses, as described above). To identify such errors for subsequent corrective action, a detailed set of computerized checks was in place at each stage of processing.

7. Confidentiality

The *Statistics Act* requires that all census information be kept confidential. No person or institution outside Statistics Canada—including other government departments and agencies, the courts and the RCMP—can access census information provided by individual respondents.

Statistics Canada places the highest priority on maintaining the confidentiality of individual census questionnaires at all stages of the census process. All tabulated data are subject to confidentiality restrictions. A series of computerized checks is performed on each table to suppress all data that could result in the disclosure of information concerning a particular agricultural operation or individual. Furthermore, data for those geographic areas with very few agricultural operations are not released separately, but are merged with data from one or more geographically adjacent areas.

6.3 Erreurs de réponse

Des exploitants ont parfois inscrit des réponses inexactes sur leur questionnaire soit qu'ils aient mal interprété une question, soit qu'ils aient inscrit leurs réponses au mauvais endroit ou encore qu'ils aient donné une réponse approximative. Il a fallu confirmer ou corriger les chiffres anormalement élevés ou les réponses incohérentes en communiquant avec les exploitants, puisque ces réponses auraient pu fausser considérablement les totaux, tant à l'échelle provinciale qu'infraprovinciale.

6.4 Erreurs de traitement

Les erreurs peuvent survenir à n'importe quel stade du traitement des données. Il peut s'agir de fautes de frappe commises pendant la saisie de données, d'erreurs de codage manuel ou d'erreurs liées à la procédure d'imputation (dont l'objet est de corriger les réponses manquantes ou incohérentes, comme on l'a vu précédemment). Pour repérer ces erreurs en vue de les corriger ultérieurement, on a mis en place un ensemble détaillé de contrôles informatisés à chaque stade du traitement des données.

7. Confidentialité

La *Loi sur la statistique* oblige à garder confidentiels tous les renseignements du recensement. Nulle personne ou institution en dehors de Statistique Canada — pas même les autres ministères et organismes fédéraux, les tribunaux ou la GRC — ne peut avoir accès aux renseignements fournis par les répondants individuels dans le cadre du recensement.

Statistique Canada accorde la plus grande priorité à la protection de la confidentialité des questionnaires individuels de recensement à tous les stades du processus du recensement. Toutes les données totalisées doivent respecter les contraintes de confidentialité. À cette fin, chaque tableau fait l'objet d'une série de contrôles informatisés visant à supprimer toutes les données susceptibles d'entraîner la divulgation de renseignements concernant une exploitation agricole particulière ou un particulier. De plus, les données des régions géographiques comptant très peu d'exploitations agricoles ne sont pas diffusées séparément, mais elles sont combinées avec celles d'une ou de plusieurs régions géographiques adjacentes.

8. Notes to Data Users

8.1 General Notes

Conversion Factors

The following factors are used in this publication to convert between different units of measurement:

| | |
|----------------|--|
| 1 acre | = 0.404 685 6 hectares |
| 1 hectare | = 2.471 acres |
| 1 arpent | = 0.845 acres (for respondents in Quebec who reported land areas in arpents) |
| 1 square foot | = 0.092 903 04 square metres |
| 1 square metre | = 10.763 91 square feet |
| 1 kilogram | = 2.204 622 6 pounds |
| 1 pound | = 0.453 592 4 kilograms |

Rounding

Totals may not equal the sum of their parts due to the use of conversion factors or the rounding of fractions to whole numbers.

Expanded Definition of a Census Farm

The definition of a census farm was expanded for the 1996 Census of Agriculture to include commercial poultry hatcheries and operations that produced only Christmas trees. Across Canada, a total of 138 commercial poultry hatcheries and 1,593 operations producing only Christmas trees were counted for the first time as census farms. See Section 9.2 for the complete definition of a census farm.

Headquarters Rule

Many agricultural operations in Canada are composed of numerous parcels of land in a number of locations. These different locations are often situated in several geographic areas (such as townships or counties). In these situations, the "headquarters rule" assigns all data collected for the agricultural operation to the geographic area where the farm headquarters is located.

8. Notes à l'intention des utilisateurs de données

8.1 Notes d'ordre général

Facteurs de conversion

Les facteurs de conversion suivants sont utilisés dans cette publication pour faire la conversion entre différentes unités de mesure:

| | |
|---------------|---|
| 1 acre | = 0.404 685 6 hectare |
| 1 hectare | = 2.471 acres |
| 1 arpent | = 0.845 acre (pour les répondants du Québec qui ont déclaré les superficies en arpents) |
| 1 pied carré | = 0.092 903 04 mètre carré |
| 1 mètre carré | = 10.763 91 pieds carrés |
| 1 kilogramme | = 2.204 622 6 livres |
| 1 livre | = 0.453 592 4 kilogramme |

Arrondissement

En raison de l'utilisation de facteurs de conversion ou de l'arrondissement des fractions en nombres entiers, il se peut que les totaux ne correspondent pas à la somme de leurs éléments.

Définition élargie de ferme de recensement

Au Recensement de l'agriculture de 1996, la définition de ferme de recensement a été étendue aux couvoirs commerciaux et aux exploitations produisant uniquement des arbres de Noël. Au total, à l'échelle du Canada, 138 couvoirs commerciaux et 1,593 exploitations ne produisant que des arbres de Noël ont été dénombrés pour la première fois en tant que fermes de recensement. Pour la définition complète de ferme de recensement, veuillez consulter la section 9.2.

Règle de l'emplacement principal

Bon nombre d'exploitations agricoles au Canada sont composées de nombreuses parcelles de terre situées en plusieurs endroits. Ces diverses parcelles sont souvent situées dans des régions géographiques distinctes (comme des cantons ou des comtés). En pareil cas, selon la «règle de l'emplacement principal», toutes les données recueillies portant sur l'exploitation agricole sont imputées à la région géographique où se trouve l'emplacement principal de l'exploitation agricole.

Incompletely Enumerated Indian Reserves and Indian Settlements

Some Indian reserves and Indian settlements were incompletely enumerated in 1996, as enumeration was either not permitted or was interrupted before it could be completed. As a result, it was not possible to identify any census farms on these particular reserves and settlements. The impact of the missing data is very slight at the larger geographic levels (Canada, province, census agricultural region), but the impact is more significant for those census divisions and census consolidated subdivisions in which the affected reserves and settlements are located.

For more information and a list of the names and locations of the 77 incompletely enumerated Indian reserves and Indian settlements, please refer to *Population and Dwelling Counts*, Catalogue no. 93-357-XPB.

8.2 Notes on Data Tables

The data validation process identified some instances in which data either were not directly comparable to data from previous censuses or were of reduced quality primarily due to coverage or response errors. After a thorough investigation of each case, the following notes were developed to identify the affected variables and to explain the situation associated with each.

Table 1

Operating arrangements

The order and wording of the questions in this section have changed since 1991. In the past, individual or family holdings were being over-reported. The changes introduced in the 1996 questionnaire contributed to an increase in the number of operations that were reported as being legally incorporated compared with previous censuses.

Table 4

Dry coloured beans

"Dry coloured beans" includes chick peas, which are also known as garbanzos.

Réserves indiennes et établissements indiens partiellement dénombrés

Un certain nombre de réserves indiennes et d'établissements indiens n'ont été que partiellement dénombrés en 1996 soit parce que le dénombrement n'a pas été permis, soit qu'il a été interrompu avant d'être mené à terme. Par conséquent, il a été impossible de dénombrer les fermes de recensement dans ces réserves et ces établissements. L'absence de données n'a qu'une faible incidence aux niveaux géographiques supérieurs (Canada, provinces, régions agricoles de recensement). Son effet est cependant beaucoup plus marqué au sein des divisions de recensement et des subdivisions de recensement unifiées où se trouvent les réserves et les établissements concernés.

Pour obtenir plus de renseignements ainsi qu'une liste des noms et des emplacements des 77 réserves indiennes et établissements indiens partiellement dénombrés, veuillez consulter *Chiffres de population et des logements*, produit n° 93-357-XPB au catalogue.

8.2 Notes sur les tableaux de données

Le processus de validation des données a fait ressortir des cas où soit les données ne pouvaient être directement comparées avec les données des recensements antérieurs, soit qu'elles étaient de qualité moindre, surtout en raison d'erreurs de couverture ou de réponse. Après avoir procédé à un examen approfondi de chaque cas, on a rédigé les notes ci-après afin d'attirer l'attention sur les variables touchées et expliquer le contexte entourant chacune d'elles.

Tableau 1

Forme juridique de l'exploitation

L'ordre et le libellé des questions de cette section ont changé depuis 1991. Par le passé, les exploitations individuelles ou familiales étaient surdénombrées. Les changements apportés au questionnaire de 1996 ont contribué à augmenter, par rapport aux recensements antérieurs, le nombre d'exploitations déclarées comme étant constituées en corporation.

Tableau 4

Haricots secs colorés

Les «haricots secs colorés» comprennent les pois chiches.

Table 10**Land in crops**

Some operators reported unplanted land intended for crops as idle land (a component of "All other land") since at the time of the Census of Agriculture, they were uncertain as to whether this land would be planted. This situation only affected farms not included in the Progress of Seeding Follow-up described in Section 5.3.1.

Tame or seeded pasture

The name and definition of this variable has changed from the previous census. In 1991, it was called "Improved land for pasture or grazing." Consequently, some respondents may have reported differently in 1996 than in 1991, thereby affecting the comparability of the data for those years.

All other land

For comparability with 1991 data, "All other land" includes Christmas tree area.

Table 11**Area in crops and summerfallow**

Some operators reported unplanted land intended for crops as idle land (a component of "All other land") since at the time of the Census of Agriculture, they were uncertain as to whether this land would be planted. This situation only affected farms not included in the Progress of Seeding Follow-up described in Section 5.3.1.

Table 13**Herbicides, insecticides, fungicides**

Operators can apply insecticides and fungicides to the same land; therefore, the sum of the responses to these two 1996 questions is not comparable to the response to the single 1991 question which asked for the total area on which insecticides or fungicides were used.

The area of land that has been treated with herbicides, insecticides and fungicides is under-reported. Some respondents reported chemical expenses, but did not report any corresponding areas to which these chemicals were applied. Telephone follow-up with a sample of these respondents confirmed that some respondents had mistakenly reported for 1996 instead of 1995, as requested. This explained their response because at the time the questionnaire was completed

Tableau 10**Terres en culture**

Certains exploitants ont déclaré des terres non ensemencées destinées aux cultures comme étant des terres inexploitées (une des composantes des «Autres terres») puisqu'au moment du Recensement de l'agriculture ils ne savaient pas si ces terres seraient ensemencées ou non. Cette situation n'a touché que les fermes non incluses dans le Suivi de l'état d'avancement du semis dont il est question à la section 5.3.1.

Pâturages artificiels ou ensemencés

Le nom et la définition de cette variable ont changé depuis le recensement antérieur. En 1991, elle s'appelait «Terre améliorée pour le pâturage ou le pacage». Par conséquent, certains répondants peuvent ne pas avoir répondu de la même façon en 1996 qu'en 1991, ce qui influe ainsi sur la comparabilité des données pour ces années.

Autres terres

Aux fins de la comparabilité avec les données de 1991, «Autres terres» comprend la superficie en arbres de Noël.

Tableau 11**Superficie des terres en culture et en jachère**

Certains exploitants ont déclaré des terres non ensemencées destinées aux cultures comme étant des terres inexploitées (une des composantes des «Autres terres») puisqu'au moment du Recensement de l'agriculture ils ne savaient pas si ces terres seraient ensemencées ou non. Cette situation n'a touché que les fermes non incluses dans le Suivi de l'état d'avancement du semis dont il est question à la section 5.3.1.

Tableau 13**Herbicides, insecticides, fongicides**

Les exploitants peuvent appliquer des insecticides et des fongicides sur la même terre; par conséquent, la somme des réponses à ces deux questions de 1996 ne peut être comparée à la réponse obtenue à l'unique question de 1991 qui portait sur la superficie totale sur laquelle des insecticides ou des fongicides avaient été appliqués.

La superficie des terres qui ont été traitées aux herbicides, aux insecticides et aux fongicides est sous-estimée. Certains répondants ont déclaré des dépenses pour des produits chimiques, sans toutefois déclarer de superficies correspondantes sur lesquelles ces produits ont été appliqués. Un suivi téléphonique auprès d'un échantillon de ces répondants a permis de confirmer que certains d'entre eux avaient fourni des chiffres pour 1996 plutôt que pour 1995, comme ils auraient dû. Cela expliquait leur réponse car, au

in 1996, the chemicals purchased had not yet been applied.

Table 14

Manure application methods

Operators may apply manure using more than one method of application on the same land. Consequently, the sum of the responses to the four 1996 questions concerning manure application methods is not comparable to the response to the single 1991 question which asked for the total area on which manure was applied.

Table 19

Poultry production

The 1995 production data reported for chickens (i.e., broilers, roasters and Cornish) and turkeys somewhat underestimate actual production on a liveweight basis because some producers reported on an eviscerated basis.

Table 20

Cattle and calves

The earlier census date in 1996 affects comparability with previous censuses due to the lower percentage of calvings that would have taken place by May 14 compared with the first week of June, when previous censuses were taken.

Due to response errors, the size of the dairy herd in Manitoba has been overstated, while the size of the beef herd has been understated. The total number of cattle and calves, however, is not affected.

Table 21

Pigs

Due to response errors, data for the two weight categories of "All other pigs"—pigs under 45 lbs (20 kg) and pigs 45 lbs (20 kg) and over—have been combined.

Table 23

Colonies of bees

As in 1991, some undercoverage occurred in 1996 (primarily of smaller operations).

moment où ils ont dû remplir le questionnaire en 1996, ils n'avaient pas encore appliqué les produits chimiques achetés.

Tableau 14

Méthodes d'épandage du fumier

Les exploitants peuvent épandre du fumier sur la même terre en ayant recours à plus d'une méthode d'épandage. Par conséquent, la somme des réponses aux quatre questions de 1996 concernant les méthodes d'épandage du fumier ne peut être comparée à la réponse obtenue à l'unique question de 1991 qui concernait la superficie totale sur laquelle du fumier avait été épandu.

Tableau 19

Production avicole

Les données de production de 1995 pour les poulets (c.-à-d. poulets à griller, poulets à rôti et poulets de Cornouailles) et pour les dindons et dindes traduisent une certaine sous-estimation de la production réelle selon le poids vif, car certains producteurs ont déclaré leur production selon le poids après éviscération.

Tableau 20

Bovins ou veaux

Le fait que le Recensement de 1996 a eu lieu plus tôt influe sur la comparabilité avec les recensements antérieurs à cause du plus faible pourcentage de mises bas qui auraient eu lieu avant le 14 mai, comparativement au pourcentage de celles qui auraient eu lieu avant la première semaine de juin, au cours de laquelle les recensements antérieurs se tenaient.

En raison d'erreurs de réponse, l'importance du troupeau laitier au Manitoba a été exagérée, tandis que celle du troupeau de boucherie a été sous-estimée. Le nombre total de bovins ou de veaux, toutefois, ne change pas.

Tableau 21

Porcs

En raison d'erreurs de réponse, les données pour les deux catégories de poids de «tous les autres porcs», soit celle des porcs de moins de 45 livres (20 kg) et celle des porcs de 45 livres (20 kg) et plus, ont été combinées.

Tableau 23

Colonies d'abeilles

Comme en 1991, il y a eu de ce côté en 1996 un certain sous-dénombrement (essentiellement en ce qui concerne les petites exploitations).

Table 24**Value of farm machinery and equipment**

In 1991, agricultural operators reported the farm machinery and equipment located on their operations on Census Day, regardless of ownership. For the 1996 Census of Agriculture, operators were asked to report all farm machinery and equipment that they owned or leased. This change in reporting limits the comparability of these data.

Table 25**Value of land and buildings**

In Ontario, the total value of farm land and buildings owned, and rented or leased from others, is lower than that reported in 1991. This is primarily because the total value in the four counties (Peel, Halton, York and Durham) bordering on Metropolitan Toronto, which account for about 25% of the provincial figure, has decreased by 30% since 1991.

Table 27**Farm business operating expenses**

The 1991 and 1996 data for "All other farm business operating expenses" are not comparable because three expenditures that had been included in this expense category in 1991 (packaging materials, repairs and maintenance to farm buildings and fences, and insurance premiums) became separate categories in 1996.

Table 29**Farm type**

As a result of refinements to the farm typing procedures in 1996, some census farms that reported tame hay were typed differently in 1996 than in previous censuses.

Table 30**Purchases of capital assets and capital improvements**

There has been some under-reporting of the amount paid for: new cars and other passenger vehicles used in the farm business; new farm trucks; new farm machinery and equipment; and used farm vehicles,

Tableau 24**Valeur de la machinerie, du matériel et de l'équipement agricoles**

En 1991, les exploitants ont déclaré la machinerie, le matériel et l'équipement agricoles qui se trouvaient dans leur exploitation le jour du recensement, sans tenir compte de qui en était le propriétaire. Pour le Recensement de l'agriculture de 1996, les exploitants devaient déclarer l'ensemble de la machinerie, du matériel et de l'équipement agricoles qu'ils possédaient en tant que propriétaires ou locataires. Ce changement survenu dans la façon de déclarer les données limite la comparabilité de ces dernières.

Tableau 25**Valeur des terrains et des bâtiments**

En Ontario, la valeur totale des terres et bâtiments agricoles qui appartiennent à un propriétaire, y compris les terres et bâtiments loués d'autrui, est plus faible que la valeur déclarée en 1991. Cela est principalement attribuable à une diminution de 30%, depuis 1991, de la valeur totale des terres et bâtiments dans les quatre comtés (Peel, Halton, York et Durham) avoisinant l'agglomération torontoise. Ces comtés représentent environ 25% du chiffre pour la province.

Tableau 27**Dépenses d'exploitation de l'entreprise agricole**

Les données de 1991 et de 1996 pour l'«Ensemble des autres dépenses pour le fonctionnement de l'exploitation agricole» ne peuvent être comparées parce que trois composantes qui faisaient partie de cette catégorie de dépenses en 1991 (c.-à-d. le matériel d'emballage, les réparations et l'entretien des bâtiments agricoles et des clôtures de même que les primes d'assurance) étaient des catégories distinctes en 1996.

Tableau 29**Genre de ferme**

Par suite du perfectionnement des méthodes de classement des fermes en 1996, certaines fermes de recensement ayant déclaré du foin cultivé n'ont pas été classées de la même façon en 1996 qu'aux recensements antérieurs.

Tableau 30**Achat de biens immobilisés et amélioration des immobilisations**

Il y a eu une certaine sous-estimation du montant payé pour des automobiles et d'autres véhicules neufs servant au transport des passagers qui sont utilisés dans l'exploitation agricole, des camions de ferme neufs, de la machinerie, du

machinery and equipment. This is primarily the result of respondents reporting the net value of a purchase (i.e., the amount paid minus any trade-in value) instead of the total amount paid.

Table 31

Maple tree taps

As in 1991, there has been some undercoverage of operations with maple tree taps in 1996.

Table 33

Some operators reported unplanted land intended for crops as idle land (a component of "All other land") since at the time of the Census of Agriculture, they were uncertain as to whether this land would be planted. This situation only affected farms not included in the Progress of Seeding Follow-up described in Section 5.3.1.

matériel et de l'équipement agricoles neufs de même que pour des véhicules, de la machinerie, du matériel et de l'équipement agricoles usagés. C'est en grande partie parce que les répondants ont déclaré la valeur nette des achats (c.-à-d. le montant payé moins la valeur de la reprise) plutôt que le montant total payé.

Tableau 31

Comme en 1991, on note en 1996 un certain sous-dénombrement des exploitations qui entaillent des érables.

Operators can apply insecticides and fungicides to the same land; therefore, the sum of the responses to these two 1996 questions is not comparable to the response to the single 1991 question which asked for the total area on which insecticides or fungicides were used.

The area of land that has been treated with herbicides, insecticides and fungicides is under-reported. Some respondents reported chemical expenses, but did not report any corresponding areas to which these chemicals were applied. Telephone follow-up with a sample of these respondents confirmed that some respondents had mistakenly reported for 1996 instead of 1995, as requested. This explained their response because at the time the questionnaire was completed in 1996, the chemicals purchased had not yet been applied.

Cattle and calves

The earlier census date in 1996 affects comparability with previous censuses due to the lower percentage of calvings that would have taken place by May 14 compared with the first week of June, when previous censuses were taken.

Value of land and buildings

In Ontario, the total value of farm land and buildings owned, and rented or leased from others, is lower than that reported in 1991. This is primarily because the total value in the four counties (Peel, Halton, York and Durham) bordering on Metropolitan Toronto, which account for about 25% of the provincial figure, has decreased by 30% since 1991.

Value of farm machinery and equipment

In 1991, agricultural operators reported the farm machinery and equipment located on their operations on Census Day, regardless of ownership. For the 1996 Census of Agriculture, operators were asked to report all farm machinery and equipment that they owned or leased. This change in reporting limits the comparability of these data.

Purchases of capital assets and capital improvements

There has been some under-reporting of the amount paid for: new cars and other passenger vehicles used

Herbicides, insecticides, fungicides

Les exploitants peuvent appliquer des insecticides et des fungicides sur la même terre; par conséquent, la somme des réponses à ces deux questions de 1996 ne peut être comparée à la réponse obtenue à l'unique question de 1991 qui portait sur la superficie totale sur laquelle des insecticides ou des fungicides avaient été appliqués.

La superficie des terres qui ont été traitées aux herbicides, aux insecticides et aux fungicides est sous-estimée. Certains répondants ont déclaré des dépenses pour des produits chimiques, sans toutefois déclarer de superficies correspondantes sur lesquelles ces produits ont été appliqués. Un suivi téléphonique auprès d'un échantillon de ces répondants a permis de confirmer que certains d'entre eux avaient fourni des chiffres pour 1996 plutôt que pour 1995, comme ils auraient dû. Cela expliquait leur réponse car, au moment où ils ont dû remplir le questionnaire en 1996, ils n'avaient pas encore appliqué les produits chimiques achetés.

Bovins ou veaux

Le fait que le Recensement de 1996 a eu lieu plus tôt influe sur la comparabilité avec les recensements antérieurs à cause du plus faible pourcentage de mises bas qui auraient eu lieu avant le 14 mai, comparativement au pourcentage de celles qui auraient eu lieu avant la première semaine de juin, au cours de laquelle les recensements antérieurs se tenaient.

Valeur des terrains et des bâtiments

En Ontario, la valeur totale des terres et bâtiments agricoles qui appartiennent à un propriétaire, y compris les terres et bâtiments loués d'autrui, est plus faible que la valeur déclarée en 1991. Cela est principalement attribuable à une diminution de 30%, depuis 1991, de la valeur totale des terres et bâtiments dans les quatre comtés (Peel, Halton, York et Durham) avoisinant l'agglomération torontoise. Ces comtés représentent environ 25% du chiffre pour la province.

Valeur de la machinerie, du matériel et de l'équipement agricoles

En 1991, les exploitants ont déclaré la machinerie, le matériel et l'équipement agricoles qui se trouvaient dans leur exploitation le jour du recensement, sans tenir compte de qui en était le propriétaire. Pour le Recensement de l'agriculture de 1996, les exploitants devaient déclarer l'ensemble de la machinerie, du matériel et de l'équipement agricoles qu'ils possédaient en tant que propriétaires ou locataires. Ce changement survenu dans la façon de déclarer les données limite la comparabilité de ces dernières.

Achat de biens immobilisés et amélioration des immobilisations

Il y a eu une certaine sous-estimation du montant payé pour des automobiles et d'autres véhicules neufs servant au

in the farm business; new farm trucks; new farm machinery and equipment; and used farm vehicles, machinery and equipment. This is primarily the result of respondents reporting the net value of a purchase (i.e., the amount paid minus any trade-in value) instead of the total amount paid.

Farm type

As a result of refinements to the farm typing procedures in 1996, some census farms that reported tame hay were typed differently in 1996 than in previous censuses.

transport des passagers qui sont utilisés dans l'exploitation agricole, des camions de ferme neufs, de la machinerie, du matériel et de l'équipement agricoles neufs de même que pour des véhicules, de la machinerie, du matériel et de l'équipement agricoles usagés. C'est en grande partie parce que les répondants ont déclaré la valeur nette des achats (c.-à-d. le montant payé moins la valeur de la reprise) plutôt que le montant total payé.

Genre de ferme

Par suite du perfectionnement des méthodes de classement des fermes en 1996, certaines fermes de recensement ayant déclaré du foin cultivé n'ont pas été classées de la même façon en 1996 qu'aux recensements antérieurs.

8.3 Geographic Area Amalgamations

Due to confidentiality constraints, data for census divisions or census consolidated subdivisions with very few farms were combined with data from one or more adjacent areas. The following table lists these geographic amalgamations in alphabetical order by census division. The name of the census division in which the amalgamation occurred appears in the first column. The second column shows the name of the census consolidated subdivision for which data are available. In most cases, this name is identical to that of the largest component of the amalgamation. The third column lists the names of all the geographic areas that were merged and the number of farms located in each in 1996. All census division names appear in boldface in the table.

8.3 Régions géographiques combinées

En raison des contraintes de confidentialité, les données des divisions de recensement ou des subdivisions de recensement unifiées qui ne comptent que très peu de fermes ont été combinées avec celles d'une ou de plusieurs régions adjacentes. Le tableau qui suit dresse par ordre alphabétique la liste de ces combinaisons géographiques par division de recensement. Le nom de la division de recensement où la combinaison a eu lieu apparaît dans la première colonne. La deuxième colonne indique le nom de la subdivision de recensement unifiée pour laquelle des données sont disponibles. Dans la plupart des cas, ce nom est identique à celui de la plus grande composante de la combinaison. La troisième colonne donne les noms de toutes les régions géographiques qui ont été combinées ainsi que le nombre de fermes se trouvant dans chacune en 1996. Tous les noms de division de recensement apparaissent en caractères gras dans le tableau.

9.1 Geographic Units

9.1 Unités géographiques

Census of Agriculture data are available for various pre-established statistical and administrative areas. Subject to confidentiality constraints, data in *Agricultural Profile of Canada* are published at the national and provincial levels, with a separate section containing data for the Yukon and Northwest Territories. Data in the seven Atlantic and provincial profile publications are presented by province, census agricultural region and census division, with an additional table providing selected data at the census division and census consolidated subdivision levels. These geographic levels are described below. Additional information on census geography can be found in the *1996 Census Dictionary*, Catalogue no. 92-351-XPE.

Les données du Recensement de l'agriculture sont disponibles pour divers secteurs statistiques et administratifs préétablis. Afin de respecter les contraintes de confidentialité, les données figurant dans *Profil agricole du Canada* sont publiées à l'échelle nationale et provinciale. Dans cette publication, les données pour le Yukon et les Territoires du Nord-Ouest font par ailleurs l'objet d'une section distincte. Les données qui figurent dans les sept publications dressant le profil agricole de la région de l'Atlantique et des provinces sont présentées par province, par région agricole de recensement et par division de recensement. Un tableau supplémentaire qui présente certaines données à l'échelle des divisions de recensement et des subdivisions de recensement unifiées complète le tout. Ces niveaux géographiques sont décrits ci-après. D'autres renseignements sur la géographie du recensement sont compris dans le *Dictionnaire du Recensement de 1996*, produit n° 92-351-XPB au catalogue.

Canada

Les totaux pour le Canada ne tiennent pas compte des données pour le Yukon et les Territoires du Nord-Ouest.

Province/Territory

Province and territory refer to the major political divisions of Canada. From a statistical point of view, they are a basic unit for which data are tabulated and cross-classified.

Census Agricultural Region (CAR)

A census agricultural region is a subprovincial geographic area used by the Census of Agriculture for disseminating agricultural statistics. In all provinces except Prince Edward Island and Saskatchewan, a census agricultural region is made up of groups of adjacent census divisions. In Saskatchewan, census agricultural regions are groups of adjacent census consolidated subdivisions, but these groups do not necessarily respect census division boundaries. Census agricultural regions have not been defined for Prince Edward Island, the Yukon and Northwest Territories. In the Prairie provinces, census agricultural regions are commonly referred to as crop districts.

Census Division (CD)

Census division is the general term applied to areas established by provincial law which are intermediate geographic areas between the municipality (census subdivision) and the province level. Census divisions represent counties, regional districts, regional municipalities and other types of provincially legislated areas.

In Newfoundland, Manitoba, Saskatchewan and Alberta, provincial law does not provide for these administrative geographic areas. Therefore, census divisions have been created by Statistics Canada in co-operation with these provinces for the dissemination of statistical data.

Census Consolidated Subdivision (CCS)

A census consolidated subdivision is a grouping of census subdivisions. Generally, smaller, more urban census subdivisions (e.g., towns, villages) are combined with the surrounding, larger, more rural census subdivision to create a geographic level between the census subdivision and the census division. A census subdivision with a land area greater than 25 square kilometres can form a census consolidated subdivision of its own. Also, a census subdivision with a population greater than 100,000

Province et territoire

Province et territoire renvoie aux principales divisions politiques du Canada. Du point de vue statistique, il s'agit d'une unité de base pour laquelle toutes les données sont totalisées et recoupées.

Région agricole de recensement (RAR)

La région agricole de recensement est une région géographique infraprovinciale utilisée dans le cadre du Recensement de l'agriculture pour la diffusion des statistiques agricoles. Dans toutes les provinces, sauf à l'Île-du-Prince-Édouard et en Saskatchewan, la région agricole de recensement est formée de groupes de divisions de recensement adjacentes. En Saskatchewan, les régions agricoles de recensement sont des groupes de subdivisions de recensement unifiées adjacentes, mais ces groupes ne respectent pas nécessairement les limites des divisions de recensement. Aucune région agricole de recensement n'a été définie pour l'Île-du-Prince-Édouard, le Yukon et les Territoires du Nord-Ouest. Dans les provinces des Prairies, les régions agricoles de recensement sont souvent appelées districts agricoles.

Division de recensement (DR)

Division de recensement est le terme générique qui désigne les régions établies par la loi provinciale et qui sont des régions géographiques intermédiaires se situant entre la municipalité (subdivision de recensement) et la province. Les divisions de recensement représentent les comtés, les districts régionaux, les municipalités régionales et les autres types de régions établies en vertu d'une loi provinciale.

Les lois provinciales de Terre-Neuve, du Manitoba, de la Saskatchewan et de l'Alberta ne prévoient pas la création de ces régions géographiques administratives. C'est pourquoi, en collaboration avec ces provinces, Statistique Canada a établi des divisions de recensement pour la diffusion des données statistiques.

Subdivision de recensement unifiée (SRU)

Une subdivision de recensement unifiée est un groupement de subdivisions de recensement. En général, on combine les subdivisions de recensement plus petites et plus urbaines (p. ex., villes, villages) avec la subdivision de recensement avoisinante, plus grande et plus rurale, afin de créer un niveau géographique entre la subdivision de recensement et la division de recensement. Une subdivision de recensement dont la superficie est supérieure à 25 kilomètres carrés peut former à elle seule une subdivision de recensement unifiée. De même, une subdivision de recensement dont la population

(at the time of the last census) usually forms a census consolidated subdivision of its own. The name of the census consolidated subdivision usually coincides with its largest census subdivision component in terms of land area.

9.2 Census Terms

Census farm

A census farm is an agricultural operation that produces at least one of the following products intended for sale: crops (field crops, tree fruits or nuts, berries or grapes, vegetables, seed); livestock (cattle, pigs, sheep, horses, exotic animals, etc.); poultry (hens, chickens, turkeys, exotic birds, etc.); animal products (milk or cream, eggs, wool, furs, meat); or other agricultural products (greenhouse or nursery products, Christmas trees, mushrooms, sod, honey, maple syrup products).

The definition of a census farm was expanded for the 1996 Census of Agriculture to include commercial poultry hatcheries and operations that produced only Christmas trees. This expanded definition resulted in the inclusion of 138 commercial poultry hatcheries and 1,593 operations across Canada that produced only Christmas trees.

Farm capital

Farm capital includes the value of all farm land, buildings, farm machinery and equipment (including passenger vehicles used in the farm business), and livestock and poultry. Respondents reported the value of their land, buildings, farm machinery and equipment as at May 14, 1996. Values for livestock and poultry inventories reported in the census were calculated using data on average farm prices for the various types of livestock and poultry.

Farm capital does not include the value of crops in the field or in storage, or farm inputs on hand, such as fertilizer and seed.

Farm operators

Farm operators are those persons responsible for the day-to-day management decisions made in the operation of a census farm or agricultural operation.

dépasse 100,000 habitants (au dernier recensement) forme habituellement à elle seule une subdivision de recensement unifiée. La subdivision de recensement unifiée porte généralement le nom de sa subdivision de recensement qui comprend la plus grande superficie.

9.2 Terminologie du recensement

Ferme de recensement

Une ferme de recensement est une exploitation agricole produisant dans l'intention de vendre au moins un des produits suivants: cultures (grandes cultures, fruits ou noix, petits fruits ou raisin, légumes, graines de semence), bétail (bovins, porcs, moutons, chevaux, animaux exotiques, etc.), volaille (poules, poulets, dindons et dindes, oiseaux exotiques, etc.), produits d'origine animale (lait ou crème, œufs, laine, fourrure, viande) ou autres produits agricoles (produits de serre ou de pépinière, arbres de Noël, champignons, gazon, miel, produits de la sève d'érable).

Au Recensement de l'agriculture de 1996, la définition de ferme de recensement a été étendue aux couvoirs commerciaux et aux exploitations produisant uniquement des arbres de Noël. Cette définition élargie a entraîné à l'échelle du Canada l'inclusion de 138 couvoirs commerciaux et de 1,593 exploitations ne produisant que des arbres de Noël.

Capital agricole

Le capital agricole comprend la valeur de l'ensemble des terres, des bâtiments, de la machinerie, du matériel et de l'équipement agricoles (y compris les véhicules servant au transport des passagers qui sont utilisés dans l'entreprise agricole), du bétail et de la volaille. Les répondants ont déclaré la valeur de leurs terres, de leurs bâtiments, de leur machinerie, de leur matériel et de leur équipement agricoles en date du 14 mai 1996. La valeur des stocks de bétail et de volaille déclarés à l'occasion du recensement a été calculée à l'aide de données sur les prix agricoles moyens des divers types de bétail et de volaille.

Le capital agricole ne comprend pas la valeur des cultures non récoltées ou stockées, ni celle des intrants agricoles en main, comme les engrais et les graines de semence.

Exploitants agricoles

Les exploitants agricoles sont les personnes responsables de prendre au jour le jour les décisions de gestion nécessaires à la bonne marche d'une ferme de recensement ou d'une exploitation agricole.

Farm type

Each census farm is classified according to the predominant commodity produced. This is done by estimating the potential receipts from the inventories of crops and livestock reported on the questionnaire. The commodity or group of commodities that accounts for 51% or more of the total potential receipts determines the farm type. For example, a census farm with total potential receipts of 60% from hogs, 20% from beef cattle and 20% from wheat, would be classified as a hog farm.

As a result of refinements to the farm typing procedures in 1996, some census farms that reported tame hay were typed differently in 1996 than in previous censuses.

Genre de ferme

Chaque ferme de recensement est classée selon son principal produit. On détermine ce dernier en estimant les revenus que la ferme est susceptible de tirer de la vente des cultures et du bétail déclarés dans le questionnaire. Le produit ou le groupe de produits qui représente 51% ou plus des revenus agricoles éventuels de la ferme détermine le genre de ferme. Ainsi, une ferme de recensement dont les porcs pourraient représenter 60% de ses revenus totaux, les bovins de boucherie 20% et le blé 20% serait classée comme ferme porcine.

Par suite du perfectionnement des méthodes de classement des fermes en 1996, certaines fermes de recensement ayant déclaré du foin cultivé n'ont pas été classées de la même façon en 1996 qu'aux recensements antérieurs.

Reasons why questions are asked

Step 1 asks about your farm as a business. This information tells us how Canadian farms are organized and owned.

Step 2 asks about the farm's operators. Names and addresses are used to make sure all farms are included in the census and none are counted twice.

Step 3 asks which standard measure of reporting land size you will use for the rest of the steps.

Steps 4-15 and 26 ask about the land you farm. This information shows which crops are grown and in which areas. The questions on land management practices identify what methods are being used and the extent to which farmers are implementing various practices.

Steps 16-19 ask you about the numbers of livestock and poultry on your farm. This information provides estimates on inventories and production available for domestic consumption and export.

Steps 20 and 21 ask about the market value of your farm and the machinery you use.

This information shows where certain types of farm machinery and equipment are used. This information helps businesses market their products and services.

Steps 22 and 23 ask about your farm's expenses and revenues and help us study farms of different financial sizes. Farm programs are developed and evaluated based on this information. Farm associations use this information to find out how farms are doing financially and to make representation to legislators and the public.

Step 24 asks about recent additions or purchases made for your farm. This information is used to monitor investment in farms.

Step 25 asks about your use of computers. This information will help decide how farmers get government services and information in the future.

Step 27 asks about your hired labour. This information is used to plan and develop training programs for farm workers.

The law protects what you tell us

The confidentiality of your Census of Agriculture form is protected by law. This means that only Statistics Canada employees who work with census data and have taken an oath of secrecy see your form. Your personal census information cannot be given to anyone outside Statistics Canada - not the police, not another government department, not another person. This is your right.

You can ask to see the information you gave about your farm on your 1996 Census of Agriculture form after November 1996. To do this, write to the Privacy Co-ordinator, Statistics Canada, 25th Floor, R.H. Coats Building, Ottawa, Ontario, K1A 0T6.

Raisons pour lesquelles les questions vous sont posées

L'étape 1 se rapporte à votre ferme en tant qu'entreprise. Elle nous renseigne sur l'organisation et sur les droits de propriété (la structure juridique) des fermes canadiennes.

L'étape 2 s'intéresse aux exploitant(e)s agricoles. Il est important de connaître les noms et adresses des exploitant(e)s pour s'assurer que toutes les fermes sont recensées et qu'aucune n'est comptée plus d'une fois.

L'étape 3 nous indique quelle unité de mesure vous utiliserez aux étapes suivantes pour déclarer la superficie des terres.

Les étapes 4 à 15 et 26 nous renseignent sur les terres que vous exploitez. Ces informations indiquent quelles cultures sont cultivées et dans quelles régions. Les questions sur les méthodes de gestion des terres identifient les techniques utilisées. Elles nous indiquent aussi dans quelle mesure les fermiers et fermières mettent en pratique les diverses méthodes de gestion.

Les étapes 16 à 19 permettent de répertorier le bétail et les volailles dans votre exploitation agricole. Ces renseignements fournissent une estimation approximative des stocks et de la production qui sont disponibles pour le marché intérieur et les exportations.

Les étapes 20 et 21 nous renseignent sur la valeur marchande de votre ferme et de la machinerie que vous utilisez.

Ces informations nous permettent de déterminer dans quelles régions certains types d'équipement agricole et de machines sont utilisés. Elles aident les entreprises à commercialiser leurs produits et services.

Les étapes 22 et 23 se rapportent aux dépenses et aux revenus de votre ferme; elles nous permettent d'étudier les exploitations agricoles de différentes tailles financières. Des programmes agricoles sont élaborés et évalués à partir de l'information obtenue. De plus, les associations agricoles utilisent ces informations pour évaluer la situation financière du secteur agricole et pour représenter vos intérêts auprès du Parlement et du public.

L'étape 24 fournit des renseignements sur les derniers achats que vous avez faits pour la ferme et les derniers travaux de construction et de rénovation que vous avez effectués. Ces renseignements servent à surveiller l'évolution des investissements en ce qui a trait aux exploitations agricoles.

L'étape 25 nous renseigne sur l'utilisation des ordinateurs. Cette question nous permettra de déterminer de quelle façon les agriculteurs pourront recevoir des renseignements et des services gouvernementaux à l'avenir.

L'étape 27 se rapporte à la main-d'œuvre que vous employez. Ces informations servent à planifier et à élaborer des programmes de formation pour les travailleurs agricoles.

La loi protège les renseignements que vous nous donnez

Les renseignements que vous fournissez dans votre questionnaire du Recensement de l'agriculture sont protégés par la loi. Les employés de Statistique Canada qui traiteront votre questionnaire ont prêté un serment de discrétion. Ils sont les seuls à le manipuler. Personne, ni même la police, ni aucun autre ministère ne peut avoir accès à votre questionnaire. C'est votre droit.

Vous pouvez demander à voir l'information que vous avez fournie à propos de votre exploitation agricole sur votre questionnaire du Recensement de l'agriculture de 1996 après novembre 1996. Pour ce faire, écrivez au Coordonnateur de la protection de la vie privée, Statistique Canada, 25^e étage, Immeuble R.-H. Coats, Ottawa (Ontario) K1A 0T6.

Si vous avez des questions concernant le Recensement de l'agriculture, appelez-nous sans frais, au 1-800-216-2299

ESAS Agricultural Statistics on CD-ROM

Whether you are interested in detailed statistics on dairy farming in Ontario, off-farm income in Saskatchewan, or poultry production in Quebec, the data are all there in one easy-to-use package on the ESAS CD-ROM. ESAS, the Extraction System of Agricultural Statistics, combines software with data on a compact disc to give clients desktop access to a wide array of farm financial and physical statistics.

Whether you need the information by region, farm type or revenue class, ESAS has:

- *a complete itemization of operating revenues and expenses;*
- *sources and levels of off-farm income for operators and farm families;*
- *assets, liabilities, and capital investment for farms; and*
- *land use and livestock inventories.*

The job of administering and evaluating agricultural programs is a challenging one. ESAS simplifies the research burden of program analysts and government administrators with important data on the financial and physical status of Canadian farms. Trade in your stacks of computer printouts for one easy-to-use CD-ROM.

The ESAS CD-ROM (catalogue no. 21F0001XCB) is \$625 (plus GST/HST and applicable PST) in Canada and US \$625 outside Canada. Annual Updates are available after the initial purchase for only \$295 (plus GST/HST and applicable PST) in Canada and US \$295 outside Canada. A discount is available to all educational institutions.

SESA Statistiques agricoles sur CD-ROM

Que votre domaine d'intérêt soit l'élevage laitier en Ontario, les revenus hors ferme en Saskatchewan ou la production de volaille au Québec, toutes les données sont disponibles dans la trousse du CD-ROM SESA. Le SESA, le système d'extraction des statistiques agricoles, combine logiciel avec données sur un disque compact pour donner aux clients l'accès à un large éventail de statistiques agricoles financières et physiques.

Que vous ayez besoin d'information par région, par type d'exploitation agricole ou par catégorie de revenus, le SESA comprend :

- *le bilan complet des revenus et des dépenses d'exploitation;*
- *les sources et le niveau des revenus hors ferme des exploitants agricoles et des familles agricoles;*
- *l'actif, le passif et les immobilisations;*
- *les estimations portant sur l'utilisation des terres et les stocks de bétail.*

La gestion et l'évaluation des programmes agricoles présentent un défi. Le SESA simplifiera le travail de recherche des analystes des programmes et des gestionnaires des gouvernements en leur fournissant d'importantes données sur la situation financière et matérielle des exploitations agricoles canadiennes. Échangez vos piles d'imprimés d'ordinateur contre un CD-ROM facile à utiliser.

Le CD-ROM du SESA (n° 21F0001XCB au catalogue) coûte 625 \$ (TPS/TVH en sus et TVP s'il y a lieu) au Canada et 625 \$ US à l'extérieur du Canada. Les mises à jour annuelles coûtent seulement 295 \$ (TPS/TVH en sus et TVP s'il y a lieu) au Canada et 295 \$ US à l'extérieur du Canada une fois que vous avez acheté la trousse initiale. Tous les établissements d'enseignement peuvent profiter d'un rabais.
